

# IR710

## IRIS Recognition Access Controller with Time Attendance

IR710 is IRIS verification time attendance and access control model, Powerful function and friendly interface, adopting SQL Server database ensures data security, perfect data management function. Can widely applied variously verification occasion, such as time attendance, access control, test management, holder mount guard management and so on.

- Secondary Development
- Supports secondary development with both Android and Linux dual system inside,
- Bright Science and Technology
- New industrial design, perfect and elegant style
- A variety of colors, bright science and technology
- Super-fast Recognition

### Features :

#### Secondary Development

- IR710 fully supports secondary development with both Android and Linux dual system inside, well equipped detailed for interface document and strong back-office technical team support.

#### Bright Science and Technology

- New industrial design, perfect and elegant style
- A variety of colors, bright science and technology

#### Super-fast Recognition

- This new generation of binocular iris optical system presents sharper images , wider recognition , more flexible capture than before,
- This new generation of iris recognition algorithm registers recognition faster, adapts all kinds of environment and people more.

### Specifications :

Model Number	IR710
Size	182mm*76mm*230mm
Features	Iris recognition embedded devices
Registration Speed	<1s
Identification Speed	≤300ms
Working Distance	130-190 mm.
Work Voltage	DC5V
Peak Current	≤ 1.5A
Work Temperature	-10°-50°
Eyes Overlooking Angle	≤ 25°
Operation Tips	Voice and optical guidance

#### Connection Diagram

Support B/S Software
